Issue 2 | Q2 | 2020

### Solife Suite 7

Welcome to this new issue of Vermeg's Solife quarterly newsletter. We aim to keep you informed on what Vermeg is achieving and envisioning.

### Enhancements

Solife is changing its skin, as its screens are undergoing significant change. A Swing screen replacement project is in place to freshen Solife's look and feel. Additionally, new user digital journeys are in development to better improve customer experience and streamline processes.

### New Non-Life Digital Journey

VERMEG's digital journeys alleviate day-to-day constraints and provide an end-to-end and seamless way to get things done. A new non-life insurance subscription process for brokers is now available. It provides data simulation, eligibility criteria validation, proposal documents generation, and several dashboards.

### New Eligibility Module

The Eligibility module is a standard component that determines if a concept is eligible for a service, based on configurable business rules and a set of data. The main functionalities of this component are:

- The possibility to configure a set of concepts and services on which the eligibility will be determined
- The possibility to configure a set of parameters of the concepts already defined
- The possibility to configure a set of business rules that will be executed by a rule engine to determine eligibility
- Interfaces connected with external systems to load data inside the module and execute the rules engine

### Trends: Constant Innovation

It is now becoming clear that more and more companies want to avoid disrupting their legacy systems. They prefer to innovate by opting for a component-based IT landscape evolution, where digital transformation and innovation are delivered gradually, smartly, and securely.

This approach enables the insurer to capitalize on the legacy systems business value by digitizing without having to do a full system replacement. VERMEG contributes and favors this approach by providing a full catalog of business and technical components relevant to the bank and insurance sectors.

### Upcoming

Solife's upcoming release is scheduled for 15 September 2020.

### Employee Benefits

The existing Employee Benefits module has gone through a technical upgrade:

- Its core was upgraded to Palmyra 12.6.3,
- It is now REST API-based,
- It has a new theme.

**Palmyra** is VERMEG's home-grown digital transformation platform. In addition to being used by many high-profile clients, It is also used by VERMEG as a development toolkit to maintain and develop its other products (Megara, Solife, Soliam, Colline, etc.).
