Solife Suite 7

Welcome to this new issue of Vermeg's Solife quarterly newsletter. We aim to keep you informed on what Vermeg is achieving and envisioning.

Solife is proud to announce that it released the S7.3 on March 16th, 2020. This version, just like the previous three from last year, provides even more functional and technical enhancements, additional legal compliance, and increased industrialization.

Functional Enhancements

Some of the key functional enhancements are retroactive management and retroactive subscription - the S7.3 is better aligned with legal requirements with the addition of Pacte Law (a.k.a. Loi Pacte). The Pacte Law support enables an easier and more optimized management of the pension savings between the insurance company and the asset manager, through the standardization of products (group products, individual products, and universal products).

Technical improvements

- PostgreSQL compatibility
- Docker container support

Quality improvements

- 100% covered by automatic testing for Web Services

Industrialization

- New version of the migration tool
- Annotation Checker tool
- New version of ODS based on spring batch
- Transport Param Tool

Upcoming

Solife's roadmap reflects Vermeg's ambitious vision when it comes to providing a reliable and feature-rich product. It is also the result of many discussions with our clients who expressed their new needs and shared with us their own vision of how they wish to evolve.

As such, the upcoming standard release in September 2020 will include a larger API catalog to accelerate and streamline Front End deployments.

Trends

Solife's readiness to deal with the Pacte Law generated interest for many prospects are considering Solife to manage future insurance products.

We have also seen a marked interest in Solife as a solution which makes it possible to set up a "best in class", closed book competence center enabling the rapid decommission of legacy systems, reduce cost per policy and create variable run cost, thanks to the efficiency of its processes.

COVID-19

Coronavirus has impacted us all, both personally and professionally. We recognize that customers rely on us and may face an increased need to leverage our solutions to enhance their business continuity plans. At VERMEG, we're working to do fulfill our responsibilities, by continuing to serve our clients while providing additional support and service to further help them handle these challenging times. Our top priority is to protect the health and well-being of our employees and our communities, and at the same time continue to serve our clients without interruption. Please do not hesitate to contact us using the usual channels during this unprecedented period.

Did you know?

Vermeg can help you digitize your solutions. As such, Vermeg has developed a seamless end-to-end insurance digital journey that meets your end customers' expectations. The journey combines analysis, customer knowledge, and artificial intelligence to enable you to increase sales performance and meet your customers' expectations, strengthening your relationship with your base customers and ensuring their loyalty.

This journey is based on our vision of creating a middle layer to your system to assist you in providing attractive and easy to understand offers which can even free you from potential existing systems constraints.
